LIVE GBT TREATMENT

Raffaele Muollo

Discover how the Guided Biofilm Therapy protocol can make a difference in everyday oral prophylaxis! In this live demonstration, Dr. Raffaele Muollo, a certified SDA Trainer, will guide you through every stage of this treatment, highlighting how the 8 steps of GBT ensure effective and safe removal of bacterial biofilm. The advanced use of AIRFLOW® MAX, AIRFLOW® powder and the PIEZON® PS instrument will ensure a gentle, minimally invasive approach, providing comfort for both patients and practitioners thanks to the PIEZON NO PAIN® MAX module. Don't miss the chance to witness the benefits of GBT in daily practice firsthand!

PRÉIME DERMAFACIAL AND SKIN ANALYZER: FROM DIGITAL SKIN ANALYSES TO INTEGRATED AND SCALABLE AESTHETIC PROTOCOLS

Pamela Di Gennaro

EXPO DENTAL MEETING | RIMINI - ITALY 14-15-16 MAY 2026

EXPO DENTAL LIVE ON STAGE

The evolution of aesthetic medicine calls for increasingly personalized approaches that can be integrated and sustained in everyday practice. Préime DermaFacial is a comprehensive ecosystem that combines advanced diagnostics with modular treatment protocols by means of a skin analyzer. Starting from an objective skin analysis, professionals can customize their treatments and integrate them seamlessly with existing aesthetic medicine procedures already offered in their practices. This system also enables scalable management of services, improving patient loyalty and the economic efficiency of these practices. A concrete opportunity to expand services in a structured, differentiated way.

MIT PROTOCOL: GUIDED PERIODONTAL THERAPY, LIVE ON PATIENTS

Consuelo Sanavia

During this live clinical session, the MIT protocol will be applied in the management of the periodontal patient, integrating the recommendations of EFP guidelines with the targeted use of NSK technologies. Through the use of Varios Combi Pro 2, powders and ultrasonic tips will be selected for each of the different operative phases. This will demonstrate how the choice of instruments influences the effectiveness, safety, and comfort of the treatment. This demonstration will help participants understand the clinical rationale behind each therapeutic decision, highlighting the active role of operators in non-surgical periodontal therapy.

OPUS BY ACTEON: ADVANCED TECHNOLOGY IN PREPARATION FOR WHITENING TREATMENTS

Sara Citterio

Based on the MINST protocol, this workshop explores the crucial role of professional dental hygiene in optimizing whitening results. Through the use of powders, it is possible to achieve effective, minimally invasive cleaning, improving the removal of biofilm and surface stains. This approach helps prepare patients, promoting a more uniform, longer-lasting outcome of whitening treatments. This session will provide practical and clinical guidance for integrating these techniques into professional practice.

PERFORMING TEETH WHITENING IN YOUR PRACTICE OR AT HOME: CUSTOMIZED SYSTEMS FOR BOTH DENTISTS AND PATIENTS

Tatiana Giulia Rizzati, Arianna Iacone

Today, teeth whitening is one of the most sought-after aesthetic treatments - therefore, a real growth opportunity for dental practices. This workshop will feature a live clinical demonstration of professional whitening for dental practices with the Genius system and will include explanations on how to perform personalized at-home whitening with the Tailor system. Also, you will be introduced to the new frontiers of this treatment and to the strategies aimed at effectively integrating it into your practice. A special focus will be placed on managing tooth sensitivity, too - both before and after whitening.

ADVANCED THREAD LIFTING: THE NON-SURGICAL LIFT THAT REDEFINES THE FACE

Olena Nazarko

Advanced thread lifting with PDO threads is an increasingly relevant, minimally invasive procedure in facial aesthetic medicine, aimed at improving skin laxity and redefining facial volumes without the need for surgery. The effectiveness of this treatment is based on careful patient selection, a thorough understanding of the anatomy of suspension planes, and the proper use of lifting threads. During this live session, indications, vector planning, insertion techniques, and the management of the main critical issues will be illustrated, with the goal of achieving a natural, safe, harmonious result.

FULL FACE WITH LIVE RUSSIAN LIPS TECHNIQUE: STRATEGY, TECHNIQUE, AND RESULTS IN GLOBAL FACIAL HARMONIZATION

Olena Nazarko

Full-face treatment is an advanced approach to facial aesthetic medicine, based on a global and integrated vision of proportions and volumes. In this context, the Russian Lips technique plays a strategic role in defining the lower third of the face, contributing to the overall balance of the profile. During this live session, clinical assessment, vector planning, and a selection of the most appropriate injection techniques will be illustrated, with a focus on safety, indications, and the management of potential complications. The goal is to achieve a harmonious, natural, personalized result.

AESTHETIC TREATMENTS OF THE PERIORAL REGION BY MEANS OF PUNTURINA FILLERS BY F.AESTHETIC

Benito Paolo Chiodo

Contemporary smile aesthetics has transcended the boundaries of hard tissues and has expanded to the harmony of perioral soft tissues. This region, with its high muscular dynamics and complex vascularization, is clinically challenging when it comes to treating the signs of aging and morphological asymmetries. This presentation will analyze modern perioral aesthetic medicine protocols, assessing the effectiveness of hyaluronic acid (HA)-based fillers in restoring volume, contour definition, and deep tissue hydration. The aesthetic treatment of the perioral region by means of fillers is the natural complement to dental rehabilitation. When clinicians fully master all the injection techniques and have in-depth knowledge of the physical and chemical properties of the materials, they will be able to adopt a safe, minimally invasive "full-face" approach, thereby enhancing overall patient satisfaction.

ICLO EVOLVING SURGERY, APPLIED.

LIVE FROM THE ICLO CENTER (SAN MARINO): SURGICAL ANATOMY ON ANATOMICAL SPECIMENS FOR ORAL, IMPLANT, AND REGENERATIVE SURGERY

Fabrizio Nicoletti, Leonardo Dassatti

During this live session, the main clinically relevant regions will be illustrated by means of anatomical slides. A special focus will be placed on the relationships of these regions with vascular and nervous structures, on their implications for surgical procedures, and on both horizontal and vertical GBR in cases of severe bone atrophy. Knowledge of the vital anatomical structures is essential to plan and perform oral surgery, especially when it comes to extractive, implant, and regenerative surgery.

ADVAN IMPLANTOLOGY: PRACTICAL AND PREDICTABLE APPLICATIONS OF THE GTB SYSTEM

Guerino Caso

Native Zero Bone Loss, the GTB implant system stands out for its versatility, thanks to three implant morphologies that share the same system and prosthetic connection, thereby enabling an integrated workflow. The GTB implant line features an exclusive design, engineered and patented to ensure high primary stability and excellent aesthetics for all bone types. Choosing a GTB dental implant means choosing innovation, safety, and predictable results. The ATiM protocol supports both implantologists and prosthodontists, allowing clinical cases to be managed in a simple, reliable way, even in the most complex anatomical conditions.

REMASTERING THE ART OF IMPLANTOLOGY: NEW HORIZONS IN AESTHETICS FOR BETTER MANAGEMENT OF HARD AND SOFT TISSUES WITH THE ALPHAARCH PROTOCOL

EXPO DENTAL MEETING | RIMINI - ITALY 14-15-16 MAY 2026

EXPO DENTAL LIVE ON STAGE

Antonio Magliano, Raffaele Papa

Rehabilitation of partially edentulous patients with severe atrophy is still a demanding clinical challenge, particularly in elderly individuals with systemic conditions.
Multineo Nina is the evolution of full/partial-arch rehabilitation concepts. With its hydrophilic surface combined with Alpha-Arch protocol, it improves implant distribution and biomechanical stability. It also minimizes surgical Invasiveness, thereby enhancing aesthetic tissue management.

A CHAIR-SIDE CLINICAL CASE BY MEANS OF MIDAS: CLINICAL MANAGEMENT UP UNTIL CEMENTATION

Giovanni Ioime

The chair-side approach allows for the creation of indirect restorations in a single appointment, improving clinical efficiency and patient comfort. This clinical case will illustrate the operational management of a restoration created by means of the Midas system and will include a description of the digital workflow up to adhesive cementation. The protocol that will be adopted is simple, precise, and predictable, confirming the effectiveness of the Midas system in supporting an optimized clinical workflow and in providing reliable functional-aesthetic results.

PHASE TWO OF 3D BONE REGENERATION: COMPUTER-GUIDED SURGERY AND CONNECTIVE GRAFTS

Alessandro Cucchi, Andrea Salmaso

This event will present Phase II of a 3D bone regeneration treatment performed by means of a customized titanium mesh placed 9 months prior. This procedure will begin with a brief re-live of the key moments from Phase I, highlighting the surgical details that contribute to the success of this regenerative surgery. A live surgery operation will follow: it will include a reopening of the regenerated site, a mesh removal, and an implant placement by means of computer-guided surgery. Finally, mucogingival surgery will be performed: connective tissue will be harvested and grafted to improve the density and volume of the peri-implant tissues.
